SOLID WASTE
POLICY BOARD MEETING

April 15, 2015
Solid Waste Department
9:00 am to 3:30 pm

MEMBERS PRESENT: Leon Pfaff (La Crosse County), Jarrod Holter (City of Onalaska), Mike Wobbe (Wabasha County), Judy Storlie (Houston County), Steve Hogden (Trempealeau County), David Eddy (Buffalo County), Dale Hexom (City of La Crosse), Mike Wobbe (Wabasha County), Judy Storlie (Houston County), Steve Hogden (Trempealeau County), David Eddy (Buffalo County), Dale Hexom (City of La Crosse), Maureen Freedland and Patrick Barlow (La Crosse County) arrived at 9:40

MEMBERS EXCUSED:

MEMBERS ABSENT:

OTHERS PRESENT: Hank Koch, Nick Nichols, Randy Nedrelo, Danielle Meiners, Linda Bettin (Solid Waste Department), Rick Frank (Houston County), John Staats (STSCSWC Galesville), Brian Korth (St. Joseph’s Construction), Gary Hougum, Larry Hougum, Brian Tippetts (Hilltopper Refuse & Recycling), Scott Evans, (Harter’s Quick Clean-up), Brian Kent, Andrew Dane, (SEH), Professor John Katers, (University of Green Bay), Sharon Davidson (La Crosse County Finance Director),

Call to Order/Roll Call
Chairman, Leon Pfaff, called the meeting to order at 9:00 am.

INTRODUCTIONS
Everyone in attendance introduced themselves.

MOTION to approve previous minutes by David Eddy, SECOND by Rick Frank. MOTION passed unanimously.

CONSENT AGENDA
- Approval of Minutes (November 6, 2014)
- Previous Meeting To Do List (Hank)

PUBLIC COMMENT
None

CONFERENCE COMMITTEE REPORTS
Hank Koch, Randy Nedrelo and Nick Nichols attended the WIRMC (Wisconsin Integrated Resource Management Conference) Conference on February 24 through February 27, 2015 in Oconomowoc, Wisconsin. The Conference was excellent which was state wide. The Solid Waste Department took two UWL Students to attend the Conference also. There was a great number of college interns that attended with many representatives this year bringing the younger generations interest into the Waste Management area.
Nick Nichols attended the ORA Summit (Outdoor Recreation Alliance) March 25, 2015 in Onalaska, Wisconsin and had a booth representing the La Crosse County Solid Waste Department. They had a speaker from Chattanooga, Tennessee that talked about plans and connectivity for outdoor recreation and community development. The Summit creates a shared vision and desire to have the region be an outdoor recreation destination, identify collaborative next steps to make regional progress.

**Xcel Contract Extension**

Hank provided a Gantt Chart outlining various activities over the next two years relating to the Xcel Contract Extension. A significant portion of time from April through November, 2015 will be spent in reviewing financial performance of the Xcel Profit Center and related landfill activities. This is necessary to determine if areas of the contract need to be altered to provide a more cost effective system. Xcel has asked that the pricing for ash disposal be reduced prior to contract extension negotiations. Discussions are continuing on this but the Solid Waste Department does not see this as a prerequisite because ash pricing and the contract extension may actually be interwoven. Technical assistance in the form of a consultant and legal expertise will most likely be required for a contract extension. The Solid Waste Department working with Corporation Counsel will be undertaking a review of the existing Xcel contract to identify areas that should be modified in the event of a contract extension.

In the event that a contract extension is not chosen, the types and availability of short term alternatives to Waste to Energy would need to be identified by the end of 2015. A three month window December 2015 – March 2016 will be to sit down with Xcel to determine if a contract extension talks are a yes or no. In the event such negotiations are deemed feasible then the County Board would be asked for approval to enter into such negotiations and to appoint a negotiation team. Throughout this process, but primarily from October 2015 to February of 2016 issues that would be associated with negotiations would be identified.

Monthly status reports to the Public Works and Infrastructure Committee will continue as will monthly Xcel meetings. Pro’s and Con’s were discussed regarding Waste-to-Energy.

**Contract Extensions – Leachate Collections Lines – Speedy Clean**

At the La Crosse County Landfill approximately twenty thousand feet of pipe remove leachate so that it is discharged through the sewer and treated at the La Crosse Waste Water Treatment Plant. The DNR requires that these lines be cleaned out on an annual basis and every five years be televised to insure their operational integrity. In 2010 the Solid Waste Department requested proposals and did an extensive review of four contractors who provide such services. Speedy Clean was awarded a five year contract to provide those services which expires in 2015. Speedy Clean was approximately fourteen thousand dollars less than the other contractors when this was bid and has asked for only a three percent increase for a second five year term. Their services have been outstanding and they have been able to unclog a leachate line that no previous contractor was able to do. Because of their knowledge of the site, their low cost and the excellent service they have provided the Solid Waste Dept. is recommending that this contract be extended for a period of five years until 2020. At that time La Crosse County will again rebid this contract to insure that we are obtaining cost effective services. Hank Koch went over packet information showing the Speedy Clean Initial Contract Layout, Contract Extension Layout and other company prices.

**MOTION** by Jarrod Holter, **SECOND** by Leon Pfaff to recommend extension of the Speedy Clean Contract to 2020. **MOTION** passed unanimously.

**Contract Extensions – Engineering Consulting Services – SEH**

Since 2011, Short Elliott Hendrickson Inc. (SEH) has served as La Crosse County’s Solid Waste consultant. They are requesting the opportunity to continue in this role beyond the end of their current contract which is set to expire in February 2016. They hope to extend their term of service through June 2020, four and a half years. SEH has a current office in downtown La Crosse with 9 employees, they have helped us with projects that benefit us, have gave us great service and have reduced costs and increased revenue. They are currently working with the La Crosse County Solid Waste Department to update their Solid Waste Management Plan, a multi-faceted project that will set the stage for the structure and operation of the Department for decades to come. SEH has a detailed understanding of the infrastructure, both old and new, at the landfill site. The level of complexity and technical detail of the La Crosse County Landfill their knowledge would be costly and time-consuming to transfer to another organization. Power Point Slides showed that SEH is ninth in Solid Waste Expense and every year they are under budget.

**MOTION** by Steve Hogden, **SECOND** by Dave Eddy to recommend extension of the SEH Engineering Consulting Services Contract through June 2020 and then rebid. **MOTION** passed unanimously.
Electronics Fee for HHM
Randy Nedrelo provided a handout and discussed the cost of disposal (especially TV's) has increased steadily over the last two years. In January 2012 HHM was paid $0.01/lb for TV's, by December of 2014 HHM was charged $0.11/lb for TV's. Other prices for e-waste has changed also, although not as extreme. HHM is still getting paid or shipping out at no cost all other e-waste except CRT monitors (which has become a smaller portion of the e-waste collected). The volume of e-waste collected (and the % of TV's) continues to increase: 304,800 lbs in 2012 (178,300 TV's) 58%, 380,000 lbs in 2013 (226,000 TV's) 59% and 486,000 lbs in 2014 (339,500 TV's) 70%. The cost of disposal of TV's is no longer offset by the recycling value of the other e-waste. Disposal of TV's cost HHM $34,000 in 2014. Because of the increased disposal and labor costs due to program growth, HHM has operated at a deficit the last 3 years. The agreement with the participating municipalities does not allow HHM to charge for most of the wastes that La Crosse County residents bring to the facility. Effective 7/1/15 to charge for TV’s $5 for TV’s <25” and $10 for TV’s >25”. It will generate enough revenue to recover the disposal cost of TV’s and a flat rate will allow a simpler means of charging for the technicians.

Solid Waste Management Plan
Andrew Dane (SEH) and Professor John Katers (University of Green Bay) gave a presentation on the Strategic Issues & Initiatives, La Crosse Disposal System Solid Waste Management Plan Update and changes to the Value Statements and Mission Statements. They presented handouts and a Power Point Presentation. The overall goal of the Solid Waste Management Plan update is to make the La Crosse County and Regional Disposal System more resilient in the face of key issues including rapid technological change, financial constraints, resource competition, and changing perceptions about waste itself. The Key Purposes/Desired Outcomes are 1) Identifying and describing key issues as well as recommendations to address those key challenges. 2) Providing a document that the WDNR will identify and recognize as the approved Solid Waste Management Plan for La Crosse County and that those services within this Plan for La Crosse County and those services within this Plan that are coordinated within the Regional System. 3) Strengthening relationships of current and future participants through their active participation in the planning process. They presented an overview of each Key Strategic Issue and Potential Strategies.

2016 Price Increase
Discussions about a price increase, consisted of whether to have a larger price increase in 2017 5% $3 to 10% $6 or a smaller price increase starting in 2016 would be a better option. The Solid Waste Department has a big impact on the County’s borrowing. Their rating and the amount of debt we carry. Administration needs a little time to work with Finance to think about refinancing and how the Solid Waste Department is managing debt on a number of things. Sharon Davidson from Finance provided a handout of La Crosse County, Wisconsin, Statement of Revenues, Expenses and Changes in Net Position, Proprietary Funds for Year Ended December 31, 2014 – how did we perform in 2014? The Net Loss in 2014 was due to closure on six acres that was expensed in the year that the Solid Waste Department did the work. It was planned for. La Crosse County had the money saved for the closure and also built another six acre cell which the Solid Waste Department without having to borrow any additional money. We are at a breakeven point and will look at 2015 and see how normal of a year that is and watch that close, hoping to break even or make a little profit. Sometimes when they do the Landfill Airspace survey the Solid Waste Landfill actually comes out better, depending on how much settlement there has been. It calculated based on volume filled, how many cubic yards go in the landfill. When they do the surveys it might be a lesser number because it shrinks. Sharon Davidson comes up every month for two to three hours and meets with Hank, Randy and Danielle at the Solid Waste Department and they go over all the numbers and anything they need to do for budget changes. Until you actually see the volume numbers and the survey at the end of the year, there is often a large fluctuation.

Discontinuation of Containers/Sale of Containers
Hank Koch made a recommendation that the Solid Waste Policy Board recommend to the Public Works & Infrastructure Committee for the Solid Waste Department to discontinue the Container Rental Program and sell the unneeded containers.
MOTION by Mike Wobbe, SECOND by Steve Hogden for discussion. The Container Rental Program has 35 to 40 containers on site for haulers to rent for $3.00 per day as they need them. Haulers do not want to afford the capital investment and in the winter they do not need them. Container rentals helped in waste security. If they are going to use one of the containers they would have to bring that waste to us. Hank Koch provided a slide showing the revenues from 2010 to
2014. Looking at the revenue from the Program it is not paying for itself. Hank Koch talked with the haulers and asked them if it would be a problem if the Solid Waste Department discontinue the program and they said no. The haulers did say that they would like a chance to buy the containers. The Solid Waste Department will be keeping the containers in the citizen’s area and another six to eight containers that the Solid Waste Department uses for charity programs and other projects on the site. Hank Koch provided a slide showing the Inventory of the La Crosse County roll-off container bins that we are intending to sell. If the Solid Waste Committee recommends and the Public Works Committee approves on May 11th then the Solid Waste Department will call all containers back May 15th, clean them up, put them on a pad for inspection by the haulers and let them bid on them. The Solid Waste Department will keep the bidding local. Anybody in our system and the highest bid will get the container in June. The Solid Waste Department wants to get the containers sold, get out of the program and cut that loss. **MOTION** passed unanimously.

**Project Updates**

**Citizen’s Area**
The Solid Waste Department brought the citizen’s area to the Public Works Committee as we have seen a large increase in trailers and people abusing the system. Revenue was $100/ton and it dropped to $66/ton in the first three months. The Solid Waste Department made a proposal to the Public Works Committee and they approved it which is that if anybody comes with a trailer they are going up to a special area in the landfill. There will be a $15 fee to do that plus they will be weighed and charged $59/ton. Pick-ups were also abusing the system and that rate will go up from $15 to $25. Cars will go up from $5 to $10. The Van price will stay the same at $15. The Solid Waste Department already has flyers out there, have it on our electronic sign advertising the price increase and the Scale Attendants and Secretary are letting customers know. The Solid Waste Department will keep track of all compliments and complaints so we can review that. The Solid Waste Department did projections for the Public Works Committee and the analysis shows that it will take our revenue back to around $104/ton.

**Walz/Sjolander Wells**
The Walz well has a low level of contamination that exceeds a preventive action limit, but does not exceed a health hazard. The DNR looks at the data and they have been issuing letters to Walz for a couple of years saying the water is safe to drink. Sjolander’s well is a little bit further downstream and has only on occasion exceeded a preventive action limit. La Crosse County had been having discussions with them for about six years and we have been meeting with them and talking about different alternatives. A couple of years ago they came to us and said they were going to sue La Crosse County. La Crosse County gave suggestions of filters and other things, they wanted public water extended but they would have to annex and pay taxes, which they do not want. They hired a consultant and wanted new wells and did not get back to us for months. They made a counter proposal to us recently, Dave Lange (La Crosse County Attorney) will be bringing that to Public Works Committee on May 11th at closed session discussing the terms of it. There may be the possible cost of $150,000 to $180,000 to put two new wells in. Finance is working on which fund the money will come from. The agreement that Dave Lange is working on has a clause in it that if La Crosse County put the new wells in they release the County and it’s successors on future liability.

**Origin of Waste**
There have been some haulers pulling into Xcel and they have said they are hauling waste from one community and tell Xcel that it is from another community. Mistakes are being made but they are innocent and not trying to cheat the system. Danielle Meiners (Solid Waste Finance) is working with Xcel to try and correct the problem and find ways to try and minimize the mistakes. On the Annual Report occasionally our numbers did not agree with what the haulers said because the drivers are not giving correct information.

**Solid Waste Plan**
Talked about the BTU issue. The conclusion is that the test procedure is sound and that removing recyclables is lowering our BTU. The other factor that lowered our BTU is increasing the yield with the air knife is blowing wetter RDF across. Wetter RDF decreases the BTU value. HDR issued a report and the Solid Waste Department is satisfied with it. It’s an issue we will have to deal with.
Annual Meeting – Friday, June 19, 2015

The Solid Waste Department is sending out “Please Save The Date” cards currently for the Annual Meeting. Invitations will also be sent out. The Land Use Plan and Natural Resources Plan will have a citizens meeting that day in the afternoon after the Annual Meeting in the morning – the intent this year to get that all wrapped up, bring it back to the Solid Waste Policy Board, Public Works Committee. So La Crosse County Board can provide approval of an updated Land Use Management Plan for the site. The Solid Waste Department’s intent was that we would update our Solid Waste Plan and our Land Use Management Plan every five years. Hank brought the two of them together in 2015 so that we now will be on the same five year interval.

Construction/Demolition

The Solid Waste Department did a pilot project where we spent $10,000 and got $3,000 worth of revenue back. So La Crosse County discontinued the program after the three months. Runde Recycling received approval from the DNR for a C&D Recycling processing operation. Hank Koch visited with Matt Runde and looked at their facility which allowed to process up to 50/tons per day. The Hauler Rebate Agreements state that our haulers have to bring their waste to us; they cannot take it to Runde without a variance. The Solid Waste Department is sending out a letter to our haulers that have Rebate Agreements informing them that we looked at the facility and support the diversion of waste – if they apply for a variance, we will grant them a variance to the end of this year so that we can assess the performance of this program. If the program is working well and it’s helping the system then the Solid Waste Department will extend the variance for any hauler that asks as long as they have a Hauler Rebate Agreement with us.

Mattress Recycling

A handout from 7 River Recycling, LLC – “RECYCLE your old Mattresses & Box Springs” was handed out. La Crosse County Landfill gets 7,500 mattresses at the landfill and they are a problem to deal with. They are soft, take up space, hard to compact, work themselves up, can cause a leachate seep and get tangled in the equipment etc. Hilltoppers through 7 Rivers Recycling stepped up and said they will do a program. The Solid Waste Department will do a pilot project with them and send them not all of our mattresses but the mattresses that we have in the purple container in the citizen’s area. The charge for them is $15 a mattress which is $600/ton to divert, where the Solid Waste Department can put it in the landfill for $59/ton. The Solid Waste Department wants to try this program and has budgeted the money this year so we are doing it. The direction the Solid Waste Department is heading into is at some point we are going to have a discussion at our policy meeting about banning things from the landfill. For example, why is La Crosse County putting shingles in the landfill when we have a program that costs us less money to recycle them? Dane County has such a ban. Should La Crosse County be banning mattresses from the landfill in the future? Is there an uneven playing field out there, some people selling mattresses will come to their house and take their mattress and they will try and get it recycled covering the $15 to get it recycled. Some others when they sell mattresses will not pick up their mattresses. This is not a level playing field for our businesses with mattresses and it is not a favorable situation for our citizens. At some point should the Solid Waste Department have a discussion/recommendation to the County Board that we should ban mattresses from the landfill?

Brian Tippetts spoke about the Mattress Program – there are 30 million mattresses discarded a year in the US – about one per capita every ten years. Mattresses are inherently recyclable; over 90% we have markets to recycle those. One other issue is that with fires – if there is a spark to a mattress that can be a conduit to increase the fire potential. There are already three states in the US that have banned mattresses, Connecticut, Rhode Island and California. They say it makes sense to recycle those even though it costs more. Last year there was discussion in Minnesota about banning mattresses in that state as well. As seen with tires and other e-waste bans is that it hits the two coasts then it seems to leap frog up to Minnesota and then quickly come into Wisconsin. There is not really any good reason to put mattresses into the landfill except for cost savings. When you look at the damage to equipment, the flat tires, the springs getting caught around axles, potential for fire, they take up more space than the weight they have, we should charge more. Is there really a true savings in putting them in the landfill? There are two mattress recyclers in Wisconsin, one in Eau Claire and one here in La Crosse. There was another one in Watertown, Wisconsin that went out of business due to see how big a market share he could get and sell it to Waste Management Inc. Waste Management Inc. did not bite and so he closed the door as there was no money in it. A price he thinks for legitimate mattress recycling is $10 to $15 and most of the cost of mattress recycling is labor and transportation. He thinks Hank Koch is taking the right position of outlining to surcharge or ban or do something with mattresses. 7 Rivers Recycling, LLC is ready to work with us.
Hank Koch mentioned that this was informational and the Solid Waste Policy Board needs to get started to think about what the Solid Waste Department is going to have to do at the end of June. We will have exhausted the money the Solid Waste Department budgeted and will be pushed to make a decision. To what level does the Solid Waste Department subsidize diversion programs or do we take an action. Does La Crosse County either ban them from the landfills and find a way to get them to the recycling or do we put a special charge on all mattresses coming into the landfill that pays for the recycling.

**DNR Program**

The DNR has a number of programs set up where if you are a Municipal Solid Waste Materials Recovery Facility or if you are a C&D Recovery Facility you are exempt from the recycling fees. Non-profits such as Goodwill or Salvation Army you are exempt from certain DNR fees. They are putting the Administration part of it back onto us saying that the Solid Waste Department has to work with our haulers to do self certification etc. The Solid Waste Department is handling the process by working with the people but there is a little bit of money that we have to collect, then refund, and report to the DNR. The certifications have to be reviewed on a quarterly basis.

**Xcel Residue Variance**

Randy gave an update with the Legislatures. La Crosse County proposed and asked the Governor’s Budget Office to include us in the same type of variance that Hank discussed with other type of recyclers, the residues from Xcel. It did not pass. La Crosse County has very good support from our local Legislatures but not others. La Crosse County has approached the Joint Finance Committee which has the authority to do something about that which we have not heard back. La Crosse County has approached a Representative from Vernon County area who we asked if he would support us but have not heard back. This represents to us about $100,000 which is tremendous and significant but is not being well received. If it falls in the budget process then La Crosse County will continue to work with our legislatures and at some point try and get a new law passed.

**Anaerobic Digestion**

The Solid Waste Department had a discussion in January with Gundersen’s, City of La Crosse, Waste Water Treatment Plant, and City of Onalaska about a possibility of an opportunity of putting in an Anaerobic Digester at the Waste Water Treatment Plant for commercial food waste. The Solid Waste Department is going to have another meeting as soon as we can get everyone together. The Solid Waste Department will also be inviting Wal-Mart, Kwik Trip, Organic Valley and Festival Foods to see if they would be willing to be part of it. The Solid Waste Department’s role in this is that we are not the capital investor, not the big supplier of food waste, what we are is the facilitator. Our role is to get it out of the waste stream. The Solid Waste Department had a University student do a report and they looked at the amount of waste that might be available which was about 5,000 tons a year. 5,000 tons of food waste per year does not financially pay, it would be better to take it to a composting operation. The City of La Crosse has an Anaerobic Digester which is for bio solids only, because there may be other waste streams they need to determine if food waste is compatible, if we do what to it and is it beneficial. They might look at it and say “no” it does not.

**EMS Audit**

As part of our Green Tier Certification the Solid Waste Department has to have an Environmental Management System in place. It does not have to be registered with ISO 14001 which is the standard Environmental Management System but it has to meet to be considered compliant with that. The Solid Waste Department is in conformance with that ISO 14001 standard based on the DNR’s interpretation of how that conformance should be. The Solid Waste Department was able to self certify that we had done that the first year that the Solid Waste Department did the Environmental Management System in place. In the third year of the program the Solid Waste Department needed to have an external audit. The Solid Waste Department had an auditor come in last December and we were found to be in conformance with the DNR. One thing the Solid Waste Department had fixed was that our training did not have a good tracking system. This was put into place in two weeks and they sent a letter to the DNR saying in their opinion as an auditor the Solid Waste Department was now in conformance. It was a good experience; it did shed some light on some things that the Solid Waste Department was doing as far as our Environmental Management System. They were quite skeptical with us at first, when Randy said the Solid Waste Department could do this in one day because their experience with a lot of entities that get into the Green Tier Program really do not have any idea what it really takes to have an Environmental Management System and they find a big mess. They said ours was a very good system and that just
needed a few tweaks. They gave us a nice compliment in the end that they did not anticipate that they could get it done in one day’s time.

**Standard Operating Procedure for Enhanced Diversion**
Nick Nichols had a wood floor radio in the corner of the conference room as an example of some of the material that comes through the site. Diversion is a big part of our program. Some examples are the mattresses the Solid Waste Department is trying to pull out of the waste stream right now. Because the Solid Waste Department has the Habitat ReStore as a neighbor this has worked out real well. The Solid Waste Department has been able to identify a lot of reusable materials that come across the scale and the scale attendants are good at encouraging the people to donate the material to Habitat ReStore. It saves our customers money and keeps material out of the landfill. The Solid Waste Department tries to pull things out like the example of the wood floor radio and transport them over to the Habitat ReStore so they can sell them and make money. Some of the Solid Waste Staff had some training from the Habitat ReStore so they can identify what they can use.

**Dirty Jobs Program**
The Solid Waste Department would like to invite the Committee Members to a Dirty Jobs Day at the landfill. The Solid Waste Department is going to try and encourage County Board Members and any other municipal staff or elected officials to come to the landfill and spend the morning learning about the different processes the La Crosse County Landfill has. The La Crosse County Landfill has three different projects that we would like them to experience, Scale/Citizens area, Household Hazardous Facility as well as the Landfill. This would start in the morning with a little orientation/safety review with some breakfast and send them out to one of three stations and stay there and rotate every forty five minutes and then come back for some lunch. It would be an opportunity for the Solid Waste Department to explain what we do and how we do it, a hands on experience. The Solid Waste Department is looking to do this sometime around September.

**Calls on Contaminated Soils**
Recently the Solid Waste Department had a phone call from the Railroad with a large quantity of contaminated soil (33,000 tons) and they were looking for a low price. Randy looked at it and said it had to be considered a waste at a charge of $59/ton. The Solid Waste Department can select prices on nature of the soil but Randy, Jadd and Hank had a discussion and due to the space in the landfill they want to preserve it for garbage. If they really want to bring it in at $59/ton the Solid Waste Department will make it work as it would be a lot of revenue. The Solid Waste Department was also contacted by Winona which had a very large demolition project. They asked for special pricing and the Solid Waste Department said no there is not a special rate for demolition. Demolition is one of those rates where the Solid Waste Department would need County Board approval to change that rate. There are pros and cons, demolition is heavy, occupies less space than garbage so that would be good but it was a big quantity, fill up our site, it was going to mess up our phasing that would cost us money so the Solid Waste Department said $59/ton we cannot change it. Again, if the Solid Waste Department got the project it would be substantial revenue we would tuck it in and make it work as it is a chunk of revenue – just to be aware of when these things come up how the Solid Waste Department handles them.

**Agenda for Annual Meeting**
The Agenda for the Annual Meeting was provided in the meeting packet. The La Crosse County Landfill will have the Landfill Overview at 9:00 am to 9:45 am, the Solid Waste Policy Board will get together before that. The La Crosse County Landfill has Xcel Energy to give us an update, a break and then Neil Bolton who is doing the evaluation of our site operations as to whether the La Crosse County Landfill should internalize it, bid it or extend with the current contractor will be here. He is an international expert and get some feedback as to what he thinks about our landfill and the things the La Crosse County Landfill are doing. The Solid Waste Department asked him two questions...What can the La Crosse County Landfill do to improve the landfill? What is the La Crosse County Landfill doing too good that we are wasting money at? He will answer both of these questions. The Solid Waste Department is doing the Annual Report, internalizing things as was the request of the Solid Waste Committee.
Future Meeting Date
Set meeting date – Wednesday, July 15, 2015 – 9:00 am to 12:00 pm

MOTION by Rick Frank to adjourn the meeting. SECOND by Steve Hogden. MOTION passed unanimously. Meeting adjourned at 2:40 pm.

Approved, July 15, 2015, Linda Bettin, Recorder.
